

What are the exact categories for the Track and Field at ISP?

60 Meter Run, 200 Meter Run and the 1.5 kilometer run. Then there are throwing categories, which are Shot-put, Javelin and Discuss. Also one Long Jump category.

How many trials do you want recorded for each of the sporting categories?

It depends. For the running ones, only 2 trials are fine and for the rest 3 trials.

So then in the display table would you like all the trials displayed or just the best one?

Well I want the students to input all of their trials, because I want them to see their improvement and how consistent they are, but in the program it's the best if only the best trial is displayed because that is the one I look at myself.

For what classes is the program meant to be?

Well I will use it mainly for my middle school classes, but I also teach 10th and 9th grade and they do Track and Field as well so you might as well have those as well.

Also, for the processing of the data, what specifically would you like?

For us, finding the averages is the most important and useful part, so it would be good if the program did that. Also the best scores of classes would be quite useful to see which students are the strongest in each category.
