

Interview 1 Transcript - Appendix A

Q.1 - What is the current problem?

As of right now, all of our rosters and athletic history is stored in binders. See Mr. Albert? He spends hours sifting through pages, searching for names in order to find out what awards everyone should receive at the end of the season.

Q.2 - What exactly do you need this program to do?

I need a program that is a database, and that shows what each athlete has done. For example, does the student get a 3 year pin? A 4 year? I want to be able to type in a name, and see that they played on X team and Y team in 2014, thus deserves this award over that.

Q.3 - What exactly do you need stored?

It needs to be a program that gives the history of ISB athletics, storing player names, teams, sports, position, years, and also past awards as well.

Q.4 - How do you want information to be displayed?

If I could search for a player, and all their information comes up organized, that would be great. Pressing a button to show what awards are due is needed.

Q.5 - How do you want to make the switch to this program? Do you want past rosters to be stored now?

It can begin now, so we won't switch what we have on paper. Just upload new rosters from this point and onwards that get added to that database.

Actually, it would be good however to input the rosters all the way back to the senior class.

Q.6 - Who would be using this program?

Myself or Mr. Albert.
