

Interview 2 - Appendix B

Q.1 - What components are you satisfied with?

I like how easy it is to input information. The easier and faster it is, the better, so dropdowns and checkboxes are great. The simple window to bring up the details of each player is good. I also forgot to mention that JV needed to be an option in the beginning, so i'm glad it is here now.

Q.2 - What are some problems with the program?

Well, first of all, there are some missing options. For example, student ID number, and then pins and so forth. I also notice there isn't a place to display all the players, similar to an excel spreadsheet or one of these paper copies we have here, listing the players and their details. If there was a way to mass input data, it would be handy, since it is a bit counterintuitive having to manually type each player in.

Q.3 - And what might be some specific changes you would wish to see?

I guess being able to add student ID number, or other details listed here on this paper. If you could copy and paste players from an excel spreadsheet into a table, and hit enter, that would be great. If that's possible of course. And of course accounting for the pins each player should get, as I see that isn't an award you included. It is quite important.
