

Appendix 4: Final Interview

Student: How was your experience with the final version of the program?

Client: Well, it has definitely improved from last time, but there are still few functions that are missing that I was considering pretty important.

S: Can you give me details in what was good about this program and what was bad about this program?

C: I think the overall look of the program became much more clear and concise. It was easier to follow and I can see you added functions such as delete, sorting and adding more features to the recipe. I think those were useful and I can see myself using that. But, I would still point out that a program without a save or load function might be difficult to be used.

S: Will there be another place where I can improve on next time?

C: I would definitely add more options with search and sort functions. It would be much more convenient in a way. I do feel like I would search recipes by categories more than the recorded date. Also, I heard that I would have to delete and add new recipes when I instead want to update or edit pre-existing recipes. I would find that a bit inconvenient. But, except that I think it looks pretty good, good program.

S: Thank you so much for your contribution.

C: You are welcome!
