

Email (Final Interview)/ feedback:

So some questions to start out with:

1) Is it easy for you to input all the information on the input tab?

yes

2) Do you understand the display table, is it easy for you to follow?

yes

3) What are your thoughts on the history tab?

It would be nice to have it automatically updated instead of manually clicking on "refresh". Example, if I click on the history tab, can you make it automatically refresh when the page comes up?

4) Would you say this program can help you plan out your day and keep tabs on which tasks you have completed?

Yes.

5) Do you need any assistance in understanding the program?

The program is intuitive.

6) Were there any errors that occurred?

I was able to input tasks that had no name.

A few feed back comments that were not in the questions include:

I didn't like the fact that I had to click on refresh inside all the tabs to see an update. I would like to be able to click a tab and have it refresh with it's current status.

In the Task to Search For tab, could you do some type of regular expression on the task I'm trying to find? For example, a task could be named "Help Catherine with her homework". I just want to enter "Catherine" and have all tasks with "Catherine" listed.

Under To Do List Display, could you make the task list box larger? I like to see a bigger overview of what I need to do instead of 4 tasks at a time before scrolling down.

Under Input Task, I was able to enter 0 as the time it takes to complete. Should you add an error check for (< 0)?

It would also be nice to get an error message if I entered something incorrectly or not in the correct format.

None of the File and Edit functions work. Should they?

Otherwise, nice app.
