

Transcript of Second Interview with Client (conducted by the **author** - in bold)

Hi Mr. Narayan, this is the prototype of the GUI that I have developed based on the requirements you shared from the previous interview.

Hi, this looks great. It seems to have all the features that I needed from the program.

I am glad to hear that. Are there any changes you would like to see in the GUI of the program?

There are a few minor changes I would like to see in the GUI. First of all, would it be possible to make the legend and display more colourful?

Sure.

Another thing would be the label for the Select Time Zone to Add. Could you uncapitalize the words? Can the label for enter name be changed to title, as I would prefer that? I also have a lot of travel related Reminders, please also add that to the potential categories. Another feature that could be useful would be the level of importance for each reminder.

Yes, sure. These changes can be made rather easily. I did in fact think of the level of importance, however, the Reminders can be organized in a chronological order so those that are more urgent will automatically show on top. Would that work for you?

Yes, that's great. That solves my concern. I also had a few questions about the functions of the program, however, it seems rather clear and straightforward.

Great. I will get back to you as soon as possible with the updates prototype and hopefully a functioning program. Thank you for your time.

Thank you, looks great so far. I look forward to seeing the final result.
