

# Annotated Prototype: Appendix 3

File Edit Help

Inputting Information Calendar Dance Formations

Input New Student Information

Insert Student Name  
Insert Student Email  
Insert Student Location  
Insert time zone (GMT)  
Insert phone number  
Insert Notes

OK

Input Song Information

Insert Song Name  
Insert Artist Name

OK

List of Students List of Songs

SEARCH BAR

Name	Email	Location	GMT	Level	Phone number	Notes

The info in the columns as here is perfect and concise.

SORT BY...

- NAME A-Z
- EMAIL A-Z
- LOCATION A-Z
- GMT (ascending)

Annotations:

- Make text fields longer
- great!
- suggest to move this above table so that table columns can be wider
- scroll bar
- I need an option to edit/delete an entry

### **Summary of Prototyping Process**

The first edits on the GUI prototype were essential to get a better understanding of the relevant information my client wanted to be stored within the database, the intended look and feel of the GUI, and the actions and tasks that can be accomplished. The main changes included:

1. Moving the inputs of information above the table rather than to the side, allowing wider and more spacious displaying columns.
2. Adding a sorting and searching option within the first tabbed panel
3. Creating a more detailed version of the way in which the user will be able to create and access dance formations from the respective tab, as well as extract emails from an online sign-up sheet.
