

Interviewer: Hi, this is an interview for my HL Computer Science Internal Assessment, where I will be discussing an issue you have that could be fixed through a computer program I create for you.

Client answer 1: Ok cool, thanks. One problem I have is figuring out what to wear each day because I'm always busy and not very fashion-oriented. Sometimes I run late because of my confusion in what to wear, which can leave a bad impression, especially if I show up and the outfit I chose isn't even good.

Interviewer: So do you think something like an online closet would help you?

Client answer 2: Yes! I would like to up my style game so any way that you could help me with that would be nice. I feel like I'm always running around and not dressed appropriately for anything. Sometimes I get home from class and think, "What did I put on this morning?". Seriously, it's bad. I have a lot of clothes to wear, I just don't know how to style them, and that's why I need your help. I think this is really important, especially for my internships and work life so I look professional.

Interviewer: Well, you have come to the right person for help. As a fashion icon myself I can help you organize your closet digitally and create a product that will help give you outfit options. What specifically will help you determine what clothes you want to wear?

Client answer 3: Well, I think that an outfit generator like that would be very useful. Maybe it could determine outfits based on things like weather, temperature, occasion and the formality of the occasion, my activity levels, and more.

Interviewer: Okay, that definitely sounds like something I can help you with. I was thinking about giving you options with each run of the program. What do you think about that?

Client answer 4: That sounds like a great idea. I think two options per run would be great.

Interviewer: Is there anything else that you can think of to help you plan your outfits?

Client answer 5: One thing is that I'll have to be able to add and remove clothes as I buy and get rid of them, can I do that?

Interviewer: Absolutely, I can make you buttons for that within the product to help you with that. I think that should be enough information for now, is there anything else you can think about?

Client answer 6: So how will my outfits show up in the end? I think that just words in a table would be fine. Can you do something like that?

Interviewer: Yes, that's what I was thinking. Is there anything else?

Client answer 7: No, I think that should be great. If there is anything else I can think of I will let you know. Thank you for all of your help with this.
