

[Interview two — comments on the prototype design](#)

Summary:

- Comment on overall look of the website:
 - Make it more colorful like the original model given
 - Or make it more presentable through alignments
- Adjustments:
 - Users or staff are able to change the contents in the future meaning once they log in to one of the customer's databases, it will always store the value there. Nonetheless, transferring it to excel may be ok too since they can also edit in the file.
- Exports:
 - Exporting the information to excel because it has to be printed.
- Scanned Document:
 - The documents are supposed to be extracted accurately hence showed accurately in the text fields before filling in the table
 - Those text fields are able to be edited
 - The documents are in Thai hence information must work with Thai and numbers
- Calculation:
 - Outputs are accurate and printed into the table
- Each Table:
 - Tables serve a specific purpose hence separating pages for each table.

*Note: since this product design is based on the prototype sent, the customers do not have much feedback on the design.
